

readable medium", first mentioned in Claims 48-57, which is the vehicle On Board Computer. These inventions are not distinct but directly related, and required to communicate the said request. The direct relationship between these devices was not mentioned specifically in the patent application. Now it is being disclosed that not only are they capable of use together, they are required in order for communication to exist to complete said request and to retrieve data information.

- II. Claims 35-37, drawn to a method of resetting one or more active emission system... the "electronic device" or interface is also required in Claims 35-37 as in Claims 1-34. This "electronic device" or interface is required to communicate with the "computer readable medium" or vehicle on Board Computer in order to process and carry out the said request of retrieving data information.
- III. Claims 38-47 drawn to an electronic device... the "electronic device" is the interface used to communicate with the "computer readable medium" the vehicle on Board Computer to process and carry out said request. Just as in Claims 1-34, and Claims 35-37.
- IV. Claims 48-57, drawn to a computer readable medium, storing computer executable instruction... The "computer readable medium" mentioned in Claims 48-57 is the vehicle on Board Computer used to carry out the said request of the "electronic device" or interface in Claims 1-34, Claims 35-37, and Claims 38-47.

In summary, Restrictions I, II, III, and IV are not distinct each from the other, but actually the opposite. Even in Claim 35 where a said vehicle is placed on a dynamometer, "the requesting two or more different types on information"... is requested by the "electronic device" or interface, and processed by "the computer within said vehicle" which is the "computer readable medium". The purpose for the dynamometer in Claim 35 was to explain the procedures of said request could be effective simulating on road conditions as well, without the said vehicle being driven physically on a road or pavement. The "electronic device" and "computer readable medium are not only capable of use together, they are required for communication within Claims 1-57.

Respectfully submitted,
